The wiring from the starter begins at the ignition switch, passes through relays and fuses, and finally powers the starter motor to crank the engine.

Wiring Diagram from Starter: Basic Layout

The wiring diagram from the starter encompasses all electrical connections that activate the starter motor and its related components.

Primary Wires and Their Functions

Below are the main wires involved in the Acura RSX starter wiring diagram:

- **Battery cable (large gauge wire):** Connects directly from the positive terminal of the battery to the starter motor's main terminal (often labeled 'B' or 'M'). This wire supplies the necessary current to turn the starter motor.
- **Starter solenoid wire (trigger wire):** Usually a smaller gauge wire that activates the solenoid coil inside the starter. When energized, it engages the solenoid to connect the battery cable to the starter motor.
- **Ignition switch wire:** Sends power from the ignition switch to the starter relay or directly to the starter solenoid (depending on the vehicle's wiring design).
- **Neutral safety switch or clutch switch wiring:** Ensures the vehicle can only start in Park or Neutral (automatic transmissions) or when the clutch pedal is pressed (manual transmissions). This wiring interrupts the circuit if the vehicle is not in the correct gear.
